VALIDATION REPORT

Ethylene oxide sterilisation validation report: ECHELON 3000 handle

Validation of an ethylene oxide sterilisation process per EN ISO 11135, with EO residuals per ISO 10993-7 · EN ISO 11135:2014+A1:2019

Report number	NOT ISSUED · EXAMPLE
Holder (example)	Legal manufacturer of the ECHELON 3000 system (example holder)
Product	ECHELON 3000 staplers with battery pack, in final sterile barrier packaging
Key data	Method: ethylene oxide (public: IFU symbol glossary) · SAL 10^{-6} · all test values below are examples
Scope	Example scope statement. Validation of the EO cycle for the product family 'powered linear endocutters'. The battery pack is packed with the instrument and must not be EO-sterilised by users (IFU).

Method (example)

Approach	Overkill half-cycle approach with biological indicators (EN ISO 11135 Annex B) — example
Process challenge device	Biological indicator at the least accessible location in the handle (example)
Load configuration	Full case load, defined pallet pattern (example)
Residuals	EO and ECH per ISO 10993-7, limited exposure category (example)

Results (example values)

Step	Criterion	Result (example)
Half-cycle BI kill (3 runs)	No growth	0 positive of 30
Fractional cycle	Some survivors expected	4 of 20 positive
Bioburden, 3 lots × 10 units	Characterised	112 CFU average
EO residual after aeration	≤ limit for device category	Pass
Functional test after 2 × full cycles	Fires 12 times	Pass

Conclusion (example)

The full cycle provides a sterility assurance level of 10^{-6}. Example conclusion; not a real validation.

Signature (example, not signed)

Date: example only

SPHERITY Specimen generated by Spherity for a concept demonstration on 2026-10-16. Public facts are cited in the viewer; all results, numbers, dates and names of parties are examples.
